CAREER OBJECTIVE

Final-year B.Tech AI & ML student (CGPA 8.35) with 4 internships spanning ML model validation, full-stack development, and data science. Experienced with local LLM inference using Ollama (Llama 3.2, Gemma 3), end-to-end ML pipelines, and production-grade React/Node.js applications. Looking to join an engineering team where I can apply both AI/ML and full-stack skills to build real-world, user-facing products.

EDUCATION

Srinivas University Institute of Engineering & Technology 2022 – 2026

B.Tech – Artificial Intelligence & Machine Learning | CGPA: 8.35 / 10

Siddaganga PU Science College 2020 – 2022

PCMB (Physics, Chemistry, Mathematics, Biology) | 70%

TECHNICAL SKILLS

Languages: Python, JavaScript, SQL, C (Basics)

AI / ML: TensorFlow, Scikit-learn, OpenCV, CNN, Random Forest, Pandas, NumPy, Matplotlib, Seaborn

Local LLMs: Ollama — Llama 3.2, Gemma 3, Qwen 2.5 | Local inference, prompt engineering, context & API management

Web & Backend: React.js, Node.js, MongoDB, MySQL, HTML, Tailwind CSS, REST APIs

Tools & Cloud: Git, GitHub, AWS Cloud, Power BI, Jupyter Notebook, VS Code, Firebase, Vercel

Soft Skills: Problem-Solving, Team Collaboration, Communication, Quick Learner

WORK EXPERIENCE

NammaQA – Wizzybox — AI/ML & QA Intern Jan 2026 – Present

- Validate AI/ML model outputs and API responses using Python, Pandas, and Scikit-learn, catching edge-case failures before production deployment.
- Run inference tests and prompt quality evaluations on Llama 3.2 and Gemma 3 via Ollama, contributing to iterative model improvement pipelines.
- Design and execute API test suites covering request/response integrity, boundary conditions, and model output reliability.

Zephyr Technologies & Solutions Pvt. Ltd. — Full Stack Development Intern May – Jun 2025

- Built modular React.js UI components and integrated REST APIs, improving user engagement by 30% through frontend optimisation and seamless data flow.
- Collaborated in an agile team using Git/GitHub, delivering the full-stack project on schedule and within scope.

CodSoft — Data Science Intern Aug – Sep 2024

- Performed end-to-end EDA, data cleaning, and preprocessing using Python, Pandas, NumPy, and Matplotlib on real-world datasets.
- Built and tuned classification and regression models, extracting actionable business insights from raw data.

PROJECTS

AI-Powered Road Accident Risk Prediction for Two-Wheelers Nov 2025 – Mar 2026

- Built an ML pipeline to analyse accelerometer and gyroscope sensor data, classifying riding risk into Safe, Medium, and High categories using a Random Forest model with engineered time-domain features.
- Achieved 91% recall on high-risk events by tuning classification thresholds to minimise false negatives — critical for real-world safety alerts.
- Reduced false-positive alert rate by 22% through iterative feature selection and class-weight balancing on imbalanced sensor data.

Credit Card Fraud Detection System Jun – Aug 2024

- Designed an anomaly detection pipeline using Python and Scikit-learn on a highly imbalanced transaction dataset (fraud rate < 0.2%), applying SMOTE oversampling to improve minority-class recall.
- Reduced false positives by 18% versus baseline logistic regression by tuning decision thresholds on precision-recall curves rather than accuracy alone.

MERN Stack E-Commerce Web Application May – Jun 2025

- Built a fully responsive e-commerce platform with JWT-based user authentication, product catalogue, cart, and checkout.
- Integrated RESTful APIs connecting a React frontend to a Node.js/Express backend backed by MongoDB; end-to-end architecture from DB schema to UI.

CERTIFICATIONS

- AWS Academy Graduate – Cloud Foundations (Amazon Web Services)
- Deep Learning with TensorFlow – IBM (Coursera)
- Database Management – ITS Certification
- Suggestion: Add a recent LLM/GenAI cert — e.g. DeepLearning.AI Prompt Engineering for Developers or Hugging Face NLP course — to reinforce LLM expertise on resume.
